Supplementary: task utility vs user speed
(a) main schemes and supplementary baselines
(b) ablations of the TVCSI estimator
Utility $\sum_k U_k$ per slot
User speed [km/h]
Exact (genie DP)
Optimised (DP on $\hat{U}$)
Proposed (greedy TVCSI)
Baseline (periodic, m=2)
prediction only
importance only
snr threshold
full feedback
Proposed (greedy TVCSI)
Proposed no confidence
Proposed no importance
Baseline (periodic, m=2)
DUMMY MODELS
mean over 10 test seeds, band = 95% t-interval; full feedback ignores the budget (reference only)
